Advancing aircraft ground security

PreFlite lite

Our security systems are the most recommended by aircraft manufacturers, operators and service centers internationally.

The PreFlite system provides worldwide coverage using the international GSM mobile network, providing real-time alerts, interrogation and monitoring from any telephone.

Providing significant false alarm immunity through a patented method of range-controlled radar detection, our latest systems feature our new, easy-to-install patented high-reliability wheel well sensor, the RCR-01. This rugged, environmentally-sealed replacement for passive infrared sensors reduces false alarms significantly.

Key features

- Detects and logs any intrusion into your aircraft
- Helps you protect your onboard assets—intellectual property, luggage, equipment
- PreFlite helps make your travel experience smooth and trouble-free
- More reliable, new radar-based wheel well sensors don’t require complicated aiming
- High reliability—five-year warranty on electronics

Key benefits

- Low install weight - our lightest security system at 11 lbs.
- More reliable — new radar-based wheelwell sensors

Options

Switch runner mats
Optional mat switches install under floor coverings to secure interior of aircraft by detecting intruders’ footsteps.

Solar panel
SP-02 solar panel maintains battery life.

Upgrading to PreFlite

Contact Securaplane to find out how simple it can be to upgrade your current security system to PreFlite.

In most cases, PreFlite installs using the existing security system installation provisions with minimum effort.
