

Surface mount transformers

With the shift from plated through-hole to surface mount technologies, OECO has established a market leading position in the development of custom surface mount transformers and inductors.

OECO designs and manufactures custom surface mount transformers that can be used for tape and reel or for robotic assembly. OECO's expertise includes the ability to make gull wing and J-leads in round and/or flat wire.

OECO's research into new insulation and core materials has enabled it to design and manufacture surface mount transformers that keep pace with the shrinking form factors of other custom electronic assemblies for military, aerospace and medical applications.
